

A. O. Smith Electrical Products Company is a leading supplier of electric motors for residential, commercial, and industrial applications. With operations in the United States, Mexico, China, and Europe, A. O. Smith has the ability to serve its customers' electric motor needs on a global basis. We offer a comprehensive line of hermetic motors (used in air conditioning compressors), fractional horsepower A/C and D/C motors, and integral horsepower motors. We sell our products directly to original equipment manufacturers (OEMs), and replacement motors to HVAC and pool/pump distributors.

Hermetic motors—Precision rotor and stator kits ranging in output from 1 ½ horsepower up to 500 horsepower for use in residential and commercial air conditioning compressors, commercial air conditioning compressors and chillers.

Fractional horsepower motors—Ranging in output from 1/100<sup>th</sup> to five horsepower, these versatile motors are used in applications ranging from pumps, furnace fans and air conditioner fans and blowers to garage door openers and air compressors.

Subfractional horsepower motors—Single coil, two-pole shaded pole C-frame motors used in appliances, portable medical equipment, and ventilation fans.

Integral horsepower motors—In outputs ranging from one to 400 horsepower, used in large commercial HVAC blowers, industrial and agricultural ventilation, conveyors, and overhead cranes.
